

ALAMO RMA
Alamo Regional Mobility Authority

US 281 / Loop 1604 Interchange

Proposed Loop 1604 Improvements

Alamo RMA Commitment to Our Community

- Provide **local leadership and control** over transportation projects to keep our economy moving
- **Accelerate** the construction of needed multi-modal transportation projects to address quality of life issues
- **Leverage** federal, state, regional and local funds through the use of all available funding tools
- Ensure that motorists **will always have a choice** between tolled and non-tolled lanes, and work to develop other multi-modal projects to help keep our region moving
- Increase **travel safety** for our community by decreasing congestion

What is being proposed to be built?

Four non-toll direct connectors directly linking US 281 and Loop 1604 together – providing for operational and safety improvements to the existing roadways

Proposed US 281 / Loop 1604 Interchange Project

Loop 1604 West to 281 South

**Est. 2013 Traffic -
12500 Vehicles Per Day**

Loop 1604 East to 281 South

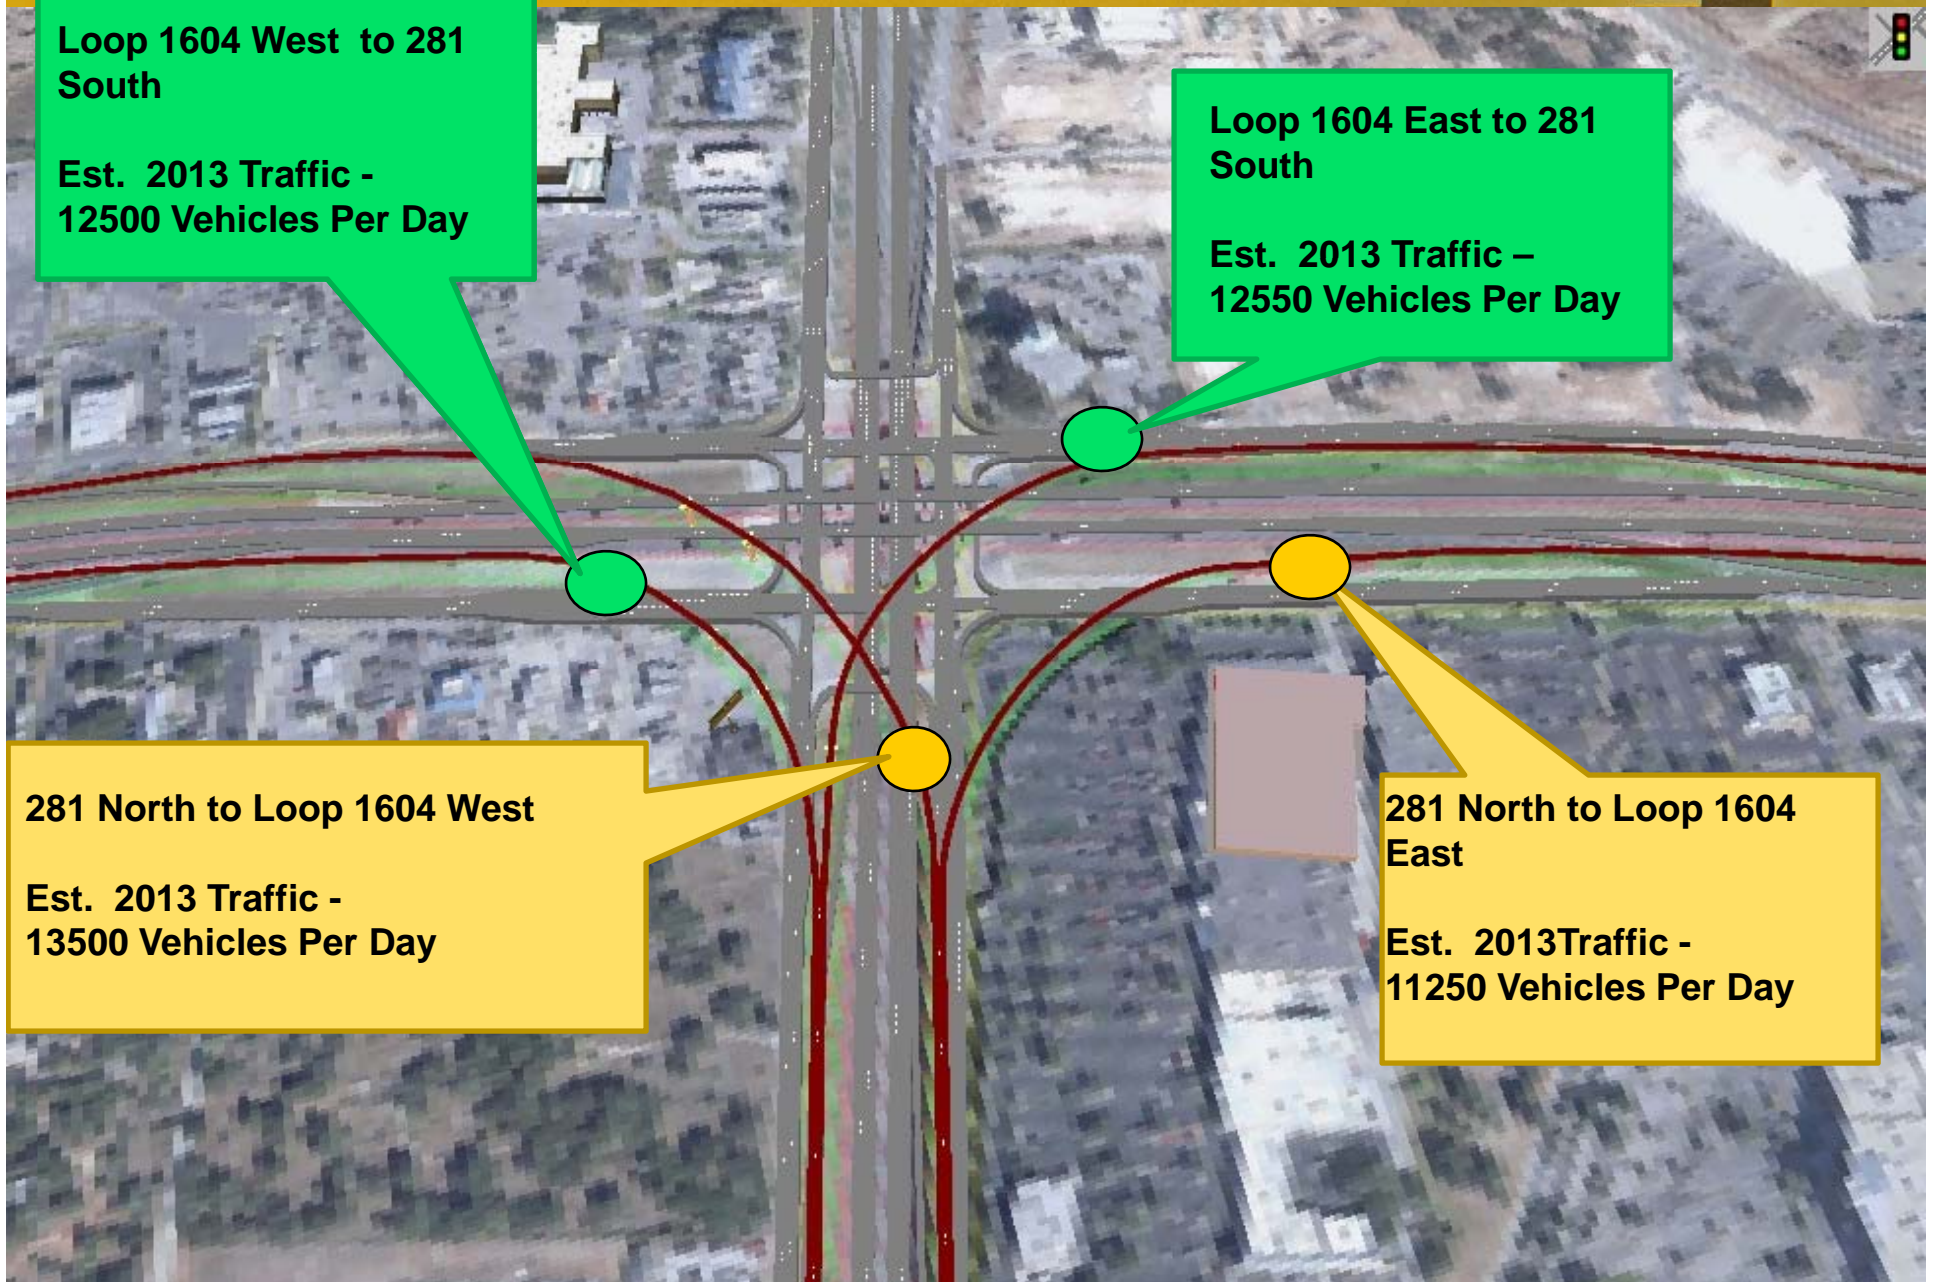

**Est. 2013 Traffic -
12550 Vehicles Per Day**

281 North to Loop 1604 West

**Est. 2013 Traffic -
13500 Vehicles Per Day**

281 North to Loop 1604 East

**Est. 2013 Traffic -
11250 Vehicles Per Day**

How does this impact Loop 1604?

- Proposed direct connectors would allow Eastbound and Westbound Loop 1604 to have direct access to US 281 Southbound
- US 281 Northbound would have direct access to Loop 1604 Eastbound and Loop 1604 Westbound – under the proposed improvements

Proposed US 281 / Loop 1604 Interchange

While the proposed project would not add capacity to US 281 North or Loop 1604, acceleration and deceleration lanes may be added to accommodate the new direct connector locations and other operational considerations may be included if the project budget allows for these improvements

How will these proposed direct connectors work?

Proposed US 281 / Loop 1604 Interchange – Will it save me time?

Based on modeling, using rush hour traffic, the addition of the four direct connectors between US 281 and Loop 1604 will potentially have the following time savings for all motorists in this area

Direction	Existing travel time– in minutes	Proposed travel time- in minutes	Potential Savings – in minutes
Westbound Loop 1604 to Southbound US 281	7	1	6
Eastbound Loop 1604 to Southbound US 281	3	2	1
Exiting Loop 1604 Eastbound to head north on US 281, using the current frontage roads	6	1	5

Additional proposed enhancements to Loop 1604 as part of this project

Proposed Loop 1604 improvements

- As part of the schematic shown at this station, the Alamo RMA is also proposing a number of potential auxiliary, safety, and operational improvements along Loop 1604 to assist with the operations and efficiency of the direct connectors
- These improvements may be included if funds are available.

What else needs to be done to make this proposed project a reality?

Proposed US 281 / Loop 1604 Interchange

- The Alamo RMA is preparing a new environmental document, a categorical exclusion, for this proposed project
- Necessary Right of Way has previously been acquired by TxDOT for this interchange and will be utilized for the construction of these four direct connectors
- The Alamo RMA is currently in the middle of a competitive process to select a design/build team for this project, and anticipates selecting the design/build team, based on this competitive process, in January 2010

If you have comments about the proposed US 281 / Loop 1604 interchange improvements -

You can do one or all of the following -

- ✓ Fill out a comment card and drop it off in any comment card box tonight
- ✓ Speak with the Court Reporter and have your comments included in the official record
- ✓ Send in your comments, via fax, email or postal mail – comments must be received by September 4, 2009 to be included in the official record for this open house

If you have comments about the proposed US 281 / Loop 1604 interchange improvements -

Mail your comments to
